

Mehran Mazhar

.NET Backend Engineer — Payments, Refunds & Money-Path Systems

mehran.mazhar@gmail.com linkedin.com/in/mehran-mazhar mehranmazhar.com github.com/MehranMazhar

Remote · Open to EOR contracting

SUMMARY

.NET backend engineer with 10+ years of experience, the last 7+ on one production travel platform (Fly Today B2C + Parto CRS B2B), owning money-path verticals end to end — refunds, wallets, withdrawals, payment-gateway integration. Ships product verticals from zero and runs them in production for years — virtual interlining, an airfare limit-order engine, gift cards.

SKILLS

Core — C# / .NET (.NET 10) · REST / Web API development on .NET · SignalR · Entity Framework Core · LINQ & SQL query optimisation · Serilog structured logging

Data — SQL Server · Redis (incl. RediSearch) · MongoDB · caching strategy (read-side caches, cache-aside, invalidation)

Messaging & background processing — RabbitMQ · MassTransit · Hangfire (jobs, scheduling, bounded retry) · MediatR · message-driven pipelines

Money path & reliability — payment gateway integration (redirect/callback flows) · refund & settlement workflow automation · distributed locking & concurrency control with Redis · webhook / outbound event surfaces · supplier API integration (REST + hub aggregators)

EXPERIENCE

.NET Backend Engineer — [Fly Today / Parto CRS](#) (B2C online travel agency + B2B travel platform) Dec 2018 — Present

- ~3,400 tickets a month through virtual interlining built from zero — search through booking, all five design specs authored.
- Launched auto-reserve from zero — an airfare limit order that buys and issues while the customer is offline, recovering otherwise-lost bookings.
- Cut refund turnaround by 85% (7 days to 1), automating the B2B/B2C flow that three teams ran by hand and keeping the finance-approval control — credit-keyed Redis locking on execution.
- 37,495 gift cards issued — shipped from zero inside the promotions rule engine, its top sustaining author.

.NET & IoT Developer — [Wenda IoT Communication Technology](#)

Apr 2018 — Oct 2018

Azure IoT Hub and Python embedded integrations.

Full-Stack Web Developer — [Sepna & Tehran Municipality ICT](#)

Dec 2014 — Feb 2018

Co-developed an ITIL-based ITSM workflow engine.

EDUCATION & PUBLIC WORK

M.Sc., Computer Software Engineering — Islamic Azad University, 2023

B.Sc., Computer Software Engineering — Islamic Azad University, 2018

Clutch Protocol — github.com/clutchprotocol

Solo open-source project grown from the M.Sc. thesis. Side project, not production.
